Gift Ideas for Kids

What this site is

An affiliate website of gift ideas for children aged 0-10. We do NOT sell anything and we do NOT process payments. Each gift card shows an image, name, short description, and a button that sends the visitor to the official retailer's page (via our affiliate link). If they buy there, we earn a commission.

Main goal: rank in search engines for queries like "gift ideas for kids", "toys for 3 year olds", "birthday gifts for a 7 year old girl".

Audience

Adults (parents, grandparents, aunts/uncles, friends) shopping for children. The site is NOT for children. Never target or collect data from under-18s.

Brand

- Name: Gift Ideas for Kids
- Look: clean, modern, friendly, lots of white space
- Colours: peach #F4906B (primary), light peach #FFB399 (accent), white #FFFFFF (background), light grey #F3F3F3 (sections/cards), dark grey #4A4A4A (text)
- Font: Nunito (fall back to Poppins, then sans-serif)
- Logo: logo.svg in the repo root (use it in the header and as the favicon source)
- Tone: warm, helpful, simple words

Pages

Home, Browse by age (0-1, 1-2, 3-4, 5-6, 7-8, 9-10), Browse by category (e.g. books, outdoor, creative, building, educational), Gift detail/search results, About, Contact, Login/Sign up, Account, Privacy Policy, Terms, Affiliate Disclosure.

Features

1. Gift listings with image, name, age range, category, and an "outbound" affiliate link

button.

2. Search and filters (age, category, price range).
3. Accounts: visitors can sign up and log in. WHAT LOGIN UNLOCKS IS STILL TO BE DECIDED (see Open questions). Likely candidates: saved wishlists, saved favourites.
4. Prices shown in the visitor's local currency, based on their country (detect country from the hosting provider's request headers; let the visitor change it manually).
5. SEO-first: fast pages, clean URLs, titles/meta descriptions on every page, sitemap.xml, robots.txt, structured data, descriptive image alt text.

Rules Claude must follow

- Never invent products, prices, or reviews. Use placeholder data clearly marked "SAMPLE" until real affiliate data is added.
- Every page that shows affiliate links must show a clear affiliate disclosure near the links, and affiliate links must use rel="sponsored nofollow noopener" and open in a new tab.
- Do not copy product images or text from retailers unless the affiliate program's terms allow it. Prefer images supplied by the affiliate network/feed.
- Prices: many affiliate programs only allow showing prices if fetched live from their official feed/API. Do not hard-code real prices. Build a price component that can be fed from an API later.
- Currency: show prices in the visitor's currency, but each retailer sells in specific countries, so link each visitor to a retailer that serves their country.
- Accounts are for adults only. Collect the minimum data (email + password via a trusted auth provider). Never store passwords ourselves.
- Never put secrets (API keys) in the code. Use environment variables and keep .env out of git.
- Mobile-first. Must work well on phones and tablets.
- Accessibility: good colour contrast, alt text, keyboard-friendly.
- Build one page or feature at a time, and explain what changed in plain language after each step.
- Ask before adding paid services or big dependencies.

Tech choices (proposed, to be confirmed)

- Framework: Next.js (good for SEO), with TypeScript
- Hosting: Vercel (free tier to start)
- Accounts + database: Supabase (email login, wishlists table)

- Styling: Tailwind CSS using the brand colours above
- Analytics: Google Search Console + a privacy-friendly analytics tool

Open questions

- What should logging in unlock? (wishlists? exclusive gift lists? something else?)
- Which affiliate programs will be used (e.g. in South Africa and other countries)?
- Which countries/currencies first?
- Will gift data be added by hand, by a spreadsheet, or by a product feed?

Legal to-do (needs a qualified person to review)

Privacy Policy (POPIA and, for overseas visitors, GDPR), Terms, Affiliate Disclosure, Cookie notice.
